Abstracts

Unlike other network connectivity services, SD WAN managed service use application-driven networking where application traffic is forwarded over different WANs based on QoS, Security and Business priority policies. SD WAN must be operated by either the enterprise or by a service provider. Many enterprises today prefer to have a Communications Service Provider (CSP) or Managed Service Provider (MSP) to deliver a SD WAN managed service rather than own and operate the SD WAN themselves, since network management and operations is not their core business. CSPs and MSPs are now aggressively introducing SD WAN managed services to address the enterprise challenges and deliver agile, assured and orchestrated third network connectivity services leveraging SD WAN technologies.
