Abstracts

According to our (Global Info Research) latest study, the global SD-WAN market size was valued at USD 1024 million in 2023 and is forecast to a readjusted size of USD 4903.1 million by 2030 with a CAGR of 25.1% during review period.

SD-WAN is an acronym for software-defined networking in a wide area network (WAN). An SD-WAN simplifies the management and operation of a WAN by decoupling (separating) the networking hardware from its control mechanism. This concept is similar to how software-defined networking implements virtualization technology to improve data center management and operation.

North America is expected to have the largest market share in 2018, whereas the Asia-Pacific (APAC) region is expected to grow at the highest CAGR from 2018 to 2023 in the Software Defined WAN Market. The major growth factors that would drive the adoption of SD-WAN include the increasing need to central network management and reducing the operating cost. Since APAC is the fastest growing region and represents the investors with immense opportunities of growth, a lot of the companies are investing in this region.

The Global Info Research report includes an overview of the development of the SD-WAN industry chain, the market status of BFSI (Virtual Appliance, Physical Appliance), Retail (Virtual Appliance, Physical Appliance), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of SD-WAN.

Regionally, the report analyzes the SD-WAN markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing
