According to our (Global Info Research) latest study, the global SD-WAN Software market size was valued at USD 182.1 million in 2023 and is forecast to a readjusted size of USD 313.9 million by 2030 with a CAGR of 8.1% during review period.

SD-WAN Software is a software-defined approach to managing the WAN (wide area network). It allows enterprises to use different types of WAN connections, such as broadband, 4G/5G, or satellite, in a flexible and cost-effective way. SD-WAN Software also provides centralized policy and management of appliances, virtual private network (VPN), and zero-touch configuration. SD-WAN Software can improve application performance, optimize user experience, and simplify operations.

The industry trend of SD-WAN Software is driven by the increasing demand for digital transformation, cloud adoption, remote work, and edge computing. Some of the key factors that influence the market growth are:

The need for agile and scalable networks that can support diverse applications and devices across multiple locations.

The desire for cost savings and operational efficiency by reducing the reliance on expensive MPLS circuits and simplifying WAN management.

The demand for improved user experience and application performance by leveraging intelligent path selection, traffic optimization, and quality of service (QoS).

The requirement for enhanced security and compliance by integrating SD-WAN with firewall, encryption, segmentation, and zero-trust policies.

The adoption of SASE (secure access service edge) as a converged model that combines SD-WAN with cloud-based security services.

The Global Info Research report includes an overview of the development of the SD-WAN Software industry chain, the market status of Large Enterprises (Cloud Based, Web Based), SMEs (Cloud Based, Web Based), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of SD-WAN Software.
