Abstracts

The global Sealing Agent for Decoration market size is expected to reach \$ 1924 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, global sales of Sealing Agent for Decoration reached approximately 315?360 K tons, with an average market price of about USD 3700?4200 tons, an annual production capacity of roughly 340?380 K tons, and an industry-average gross margin of approximately 20%.

Sealing Agent for Decoration, also referred to in China as tile joint beautifier, is a decorative and protective joint-filling material used between ceramic tiles, porcelain tiles, sintered stone, mosaics and natural stone after installation. It is commonly formulated with epoxy resin, polyurea resin, modified resin binders, cementitious binders, curing agents, colored fillers, functional additives and performance modifiers. Depending on the chemistry and packaging format, the product may be supplied as a two-component cartridge, a multi-component bucket kit, a ready-to-use paste or a polymer-modified dry powder. After application and curing, it forms a colored joint layer designed to improve stain resistance, mildew resistance, water resistance, cleanability, chemical resistance, color stability, anti-yellowing performance and long-term decorative appearance. This study focuses on decorative tile joint-filling materials used in residential renovation, kitchens, bathrooms, balconies, living areas, commercial interiors, hotels, hospitals, swimming pools, wet rooms and selected light industrial tiled surfaces.

Based on our research, Sealing Agent for Decoration should be understood as a functional and decorative upgrade within the broader ceramic tile grouting category

rather than as an equipment-type product. In international markets, the industry is usually described through terms such as tile grout, epoxy grout, reaction resin grout and tile joint filler, while the Chinese market has developed a more consumer-oriented terminology around 'tile joint beautifier,' epoxy beautifying grout, polyurea grout and epoxy colored sand. This difference in terminology creates a major scope risk: if the market is defined too broadly, ordinary cementitious grout, structural grout, tile adhesive and even installation services may be incorrectly mixed into the same revenue pool. For this study, the preferred narrow scope focuses on decorative tile joint-filling materials used for tile, porcelain, mosaic, sintered stone and natural stone joints, with emphasis on epoxy, hydro-epoxy, polyurea, epoxy colored sand, premium ready-to-use grout and higher-grade decorative cementitious grout.

From a supply perspective, the global market is shaped by four groups of participants: multinational construction chemical companies, specialist tile installation system suppliers, Chinese home-improvement material brands and regional dry-mix or resin-based building material manufacturers. MAPEI, Sika, Saint-Gobain, Bostik, LATICRETE, Henkel, ARDEX, Custom Building Products and related brands form the core international supplier base, supported by mature professional channels and broad tile installation system portfolios. In China, Oriental Yuhong, Davco China, Nippon Paint China, Keshun, Zhuogao, Fandongni, CUALI and other suppliers participate in a more retail-driven and service-linked competitive environment. Because most companies do not separately disclose tile grout or decorative grout revenue, the competitive ranking should be interpreted as an estimate based on product evidence, channel footprint, brand position and regional presence rather than as a direct financial disclosure.

Demand growth is increasingly driven by renovation and product upgrading rather than by new construction alone. In residential markets, consumers are more sensitive to blackening, mold growth, water staining and difficult cleaning of tile joints, particularly in bathrooms, kitchens and balconies. In commercial and institutional spaces such as hotels, hospitals, swimming pools, restaurants and wet rooms, the requirements for stain resistance, chemical resistance, hygiene and durability are more stringent, supporting the use of epoxy and other high-performance systems. Europe and North America remain more specification- and contractor-driven, China is more retail- and service-driven, while India and Southeast Asia are still moving from basic cementitious grouts toward polymer-modified, epoxy and premium decorative alternatives. This creates a medium-growth outlook even though the underlying tile installation market is relatively mature.
