Abstracts

Seam welding is the process that gradually, starting from one end, welds the faying faces of two alike metals. Seam welding machines are widely used in metal working industries to weld metal continuously or along a curve and it makes gas-tight seal. The seam welding machine contains two disc-shaped electrodes, as the materials to be welded together are passed between them and the current heats up the surfaces, which when pushed together creates a uniform welded assembly.

According to our (Global Info Research) latest study, the global Seam Welding Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
