According to our (Global Info Research) latest study, the global Seamed Table Tennis Ball market size was valued at US\$ 128 million in 2025 and is forecast to a readjusted size of US\$ 200 million by 2032 with a CAGR of 6.7% during review period.

A seamed table tennis ball is a type of ball that is constructed with a visible seam, typically formed where two halves of the ball are joined together. Unlike seamless balls, which are made from a single molded piece, seamed balls are stitched or glued at the seam. These balls are commonly used for recreational play and are generally less durable than seamless balls, with the seam being a weak point that can affect their bounce and performance over time. Seamed table tennis balls are often more affordable but may not provide the same consistency and quality as higher-grade balls.
