Abstracts

The global Search and Rescue Radar Transponders (SARTs) market size is expected to reach \$ 167.3 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

Search and rescue radar Transponders (SARTs) are the main means in the GMDSS for locating ships in distress or their survival craft, and their carriage on board ships is mandatory. The SART is a small, battery powered, omni–directional radar receiver and transmitter. They may also be incorporated into a float–free satellite EPIRB. The batteries fitted to a SART allow operation in the standby condition for at least 96 h, plus a further 8 h whilst being interrogated.

This report studies the global Search and Rescue Radar Transponders (SARTs) production, demand, key manufacturers, and key regions.
