A Seat Tube Battery is a type of battery designed for electric bicycles (e-bikes) that is mounted along the seat tube of the bike's frame. The seat tube is the vertical tube that extends upward from the bottom bracket area (where the pedals are attached) to the saddle. The placement of a battery in this location allows for a balanced weight distribution, contributing to improved stability and handling while riding. Seat tube batteries are typically lithium-ion due to their lightweight and high energy density, making them suitable for powering e-bikes over long distances. Depending on the design, these batteries can be either integrated into the seat tube, offering a more seamless and aesthetic appearance, or externally mounted for easier access and removal for charging.
