Abstracts

According to our (Global Info Research) latest study, the global Seawater Filter Skid market size was valued at US$ 163 million in 2025 and is forecast to a readjusted size of US$ 234 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global sales of Seawater Filter Skid were approximately 720 units, with an average ex-factory selling price of around US$220,000 per unit. Gross margins among major manufacturers were approximately 25%–38%.

A Seawater Filter Skid is an integrated filtration system designed for seawater treatment, with filters, piping, valves, instruments, backwashing mechanisms, and control systems installed on a common skid frame. Its primary function is to remove sand, shell fragments, algae, suspended solids, and other particulate contaminants from seawater, thereby reducing the risk of blockage, abrasion, and fouling in downstream pipelines and equipment. The system typically uses corrosion-resistant housings, filter screens, and piping materials suitable for seawater service. Cleaning cycles can be initiated by differential pressure, preset time intervals, or flow signals, enabling continuous filtration and automatic discharge of retained contaminants. A Seawater Filter Skid does not remove dissolved salts, and the treated medium therefore remains seawater, distinguishing it from seawater desalination equipment.

Upstream materials and components for Seawater Filter Skid mainly include stainless steel, duplex stainless steel, super duplex stainless steel, copper-nickel alloys, fiberglass-reinforced plastic, engineering plastics, wedge-wire screens, sintered screens, filter cartridges, valves, pumps, pressure and differential-pressure instruments, controllers, skid frames, and corrosion-resistant coatings. Midstream manufacturers are

responsible for filtration process design, equipment selection, skid fabrication, piping integration, automation and control, pressure testing, and marine or offshore certification. Downstream applications mainly include offshore oil and gas, seawater desalination, marine systems, coastal industries, and marine aquaculture, where the equipment is used for the front-end filtration and protection of seawater intake, cooling water, firewater, water injection, and process water systems.
