## Abstracts

The global Second Focal Plane Rifle Scopes market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The industry trend for Second Focal Plane (SFP) Rifle Scopes is seeing a continued demand for reliable, budget-friendly optics suitable for hunting and recreational shooting. Manufacturers are focusing on improving optical quality, durability, and feature sets within affordable price ranges. Additionally, there's a growing interest in integrating technologies like illuminated reticles and turret adjustments while keeping the overall cost accessible to a wide range of consumers. As the shooting sports industry expands and evolves, SFP scopes remain a staple for shooters seeking dependable performance without breaking the bank.

Second Focal Plane (SFP) Rifle Scopes are optical sighting devices used in firearms, particularly rifles, for aiming at targets. Unlike first focal plane scopes, the reticle in SFP scopes remains the same size regardless of magnification, while the target image changes. This means that the subtensions of the reticle remain accurate at only one specific magnification setting, typically the highest power. SFP scopes are known for their simplicity and affordability, making them popular among hunters and target shooters who primarily engage in shorter to mid-range shooting scenarios.
