According to our (Global Info Research) latest study, the global Secondary Battery Recycling market size was valued at USD 384.8 million in 2023 and is forecast to a readjusted size of USD 645 million by 2030 with a CAGR of 7.7% during review period.

Battery recycling is a process that helps reduce the number of batteries being disposed as municipal solid waste. Secondary batteries should be disposed properly, as they comprise several heavy metals and toxic chemicals.

A key factor driving the growth of the market is the self-sustainability of battery raw materials. Sourcing from other countries, developing domestic sourcing, or by promoting the recycling used batteries are the three ways to ensure supply of critical raw materials for manufacturing batteries in any country. The reserves for raw materials required for manufacturing secondary batteries such as natural graphite, manganese, and nickel are highly concentrated in few countries
