According to our (Global Info Research) latest study, the global Secondary Lithium Metal Batteries market size was valued at USD 863.3 million in 2023 and is forecast to a readjusted size of USD 5265.9 million by 2030 with a CAGR of 29.5% during review period.

In this report, a Lithium Metal Secondary Battery refers to a lithium-ion battery. A lithium-ion battery or Li-ion battery (abbreviated as LIB) is a type of rechargeable battery. Lithium-ion batteries are commonly used for portable electronics and electric vehicles and are growing in popularity for military and aerospace applications.

As electric, electronic, communication and computer industries have been developed rapidly, high-capacity batteries have been increasingly in demand. In respond to such demand, lithium metal secondary batteries using lithium metal or lithium alloy as a negative electrode having high energy density have been given many attentions. Lithium-metal batteries (LMB) are very attractive owing to their high theoretical energy density, but significant challenges such as low ionic conductivity and safety risks prevent their widespread application before. The vendors in the market are constantly investing in technology and innovations to produce application-specific Lithium-Metal Secondary Battery products. Many changes in terms of industry structure have been occurring downstream from the suppliers in the global Lithium-Metal Secondary Battery industry.
