According to our (Global Info Research) latest study, the global Secondary Side Controller market size was valued at US\$ 55.6 million in 2024 and is forecast to a readjusted size of USD 81.7 million by 2031 with a CAGR of 5.7% during review period.

Secondary side controllers replace the output rectifier diode in a flyback or forward topology switching regulators. Secondary side synchronous buck PWM controllers are also used for low output voltage and high current applications.

Secondary side controllers play a crucial role in power electronics systems, particularly in switch-mode power supplies (SMPS) and other power conversion applications. These controllers are responsible for regulating voltage or current on the secondary side of the power supply. The market for secondary side controllers is driven by various factors, including the growing demand for efficient and compact power supplies across industries such as telecommunications, consumer electronics, automotive, industrial automation, and renewable energy. The increasing adoption of SMPS in these sectors has fueled the need for advanced secondary side control solutions.
