This report studies the Secondary Smelting and Alloying of Aluminum market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Secondary Smelting and Alloying of Aluminum market by product type and applications/end industries.

Silicon carbide has replaced graphite in the secondary smelting and alloying of aluminum market. Degassing rotors are used to process molten aluminium. Silicon carbide made degassing rotors has better anti-oxidation and wear resistance properties to make the new rotors work five times more than graphite-based rotors. New rotors are used to remove dissolved hydrogen as it is one of the main impurities which cause performance and strength issues in casting aluminum parts. It enhances quality shows high performance and is cost effective. Morgan Advanced Materials an engineering and manufacturing company manufactured the silicon carbide made degassing rotors.

The global Secondary Smelting and Alloying of Aluminum market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.
