Secondary switchgear is a type of electrical switchgear that is used to control, protect, and isolate electrical equipment in a secondary distribution system. Secondary distribution systems are typically used to distribute electricity to commercial and industrial buildings.

Secondary switchgear typically consists of a number of components, including circuit breakers, disconnectors, isolators, switches, and overcurrent protection devices.

Circuit breakers are used to disconnect electrical circuits in the event of a fault. Disconnectors are used to disconnect electrical circuits without interrupting the flow of current. Isolators are used to disconnect electrical circuits and isolate them from the rest of the system. Switches are used to connect and disconnect electrical circuits. Overcurrent protection devices are used to protect electrical circuits from overloads and short circuits.
