## Abstracts

Secure socket layer (SSL) certification is used for setting up a secure connection between a web server and a web browser. This process of setting up a secure connection is known as SSL handshake. SSL handshake is a public key, and the private key is used to encrypt and decrypt the data. This helps in secure transmission of data between a web server and a web browser. An SSL certificate is provided by a certificate authority (CA). Its work is to authenticate and validate the organization providing a web server. After verification, this certificate is installed on the web server of the organization.

### SCOPE OF THE REPORT:

This report studies the Secured Socket Layer Certification market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Secured Socket Layer Certification market by product type and applications/end industries. A large number of end-users like large organizations and government agencies are extensively adopting OV SSL certificates as it provides better SSL security in comparison to DV SSL certificates. The SSL certificate market is experiencing growth in the SSL certification market because OV SSL certificates are ideal for organizations that have budget constraints and cannot afford EV SSL certificate. The demand for DV and OV SSL certifications from SMEs is high in comparison to EV SSL certifications because these certifications are ideal for such small companies that have budget constraints. The SSL protection for customer data on SMEs is enforced by stringent government regulations, which in turn, avoids cyber-attacks and data manipulation. This in turn, will drive the secure sockets layer (SSL) certification's

growth in the SMEs segment.
