Abstracts

Security as a service (SECaaS) is a business model in which a service provider integrates their security services into a corporate infrastructure on a subscription basis more cost effectively than most individuals or corporations can provide on their own, when total cost of ownership is considered. SECaaS is inspired by the 'software as a service' model as applied to information security type services and does not require on-premises hardware, avoiding substantial capital outlays. These security services often include authentication, anti-virus, anti-malware/spyware, intrusion detection, Penetration testing and security event management, among others.

SCOPE OF THE REPORT:

This report studies the Security as a Service market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Security as a Service market by product type and applications/end industries.
