According to our (Global Info Research) latest study, the global Security Camera SOC market size was valued at US\$ 3998 million in 2024 and is forecast to a readjusted size of USD 5471 million by 2031 with a CAGR of 4.5% during review period.

SoC (System on Chip) is a highly integrated microchip. SoC usually has a built-in central processing unit (CPU) and a graphics processing unit (GPU), and adds processing cores such as image signal processor (ISP), neural network processor (NPU), multimedia video codec and audio processor according to the needs of the usage scenario. There is a high-speed bus inside the chip that is responsible for data transmission between each processing unit and the external interface. It is also equipped with flash memory interface, storage interface, display interface, network interface and various high-speed and low-speed data transmission interfaces. SoC can process digital signals, analog signals, mixed signals, and even radio frequency signals, and is often used in embedded systems.
