According to our (Global Info Research) latest study, the global Security Detection System market size was valued at USD 3765.3 million in 2023 and is forecast to a readjusted size of USD 4941.9 million by 2030 with a CAGR of 4.0% during review period.

An intrusion detection system (IDS) is a device or software application that monitors a network or systems for malicious activity or policy violations. Any malicious activity or violation is typically reported either to an administrator or collected centrally using a security information and event management (SIEM) system. A SIEM system combines outputs from multiple sources, and uses alarm filtering techniques to distinguish malicious activity from false alarms.

The x-ray screening systems will remain the largest product type due to thereasing use of these systems in airports, shipping ports, borders, critical infrastructure for luggage inspection and people screening.
