Abstracts

The global Security Hologram market size is expected to reach \$ 6952.5 million by 2029, rising at a market growth of 4.3% CAGR during the forecast period (2023-2029).

Security holograms are labels that have a hologram printed on them for sales security reasons. Holograms on security tags are difficult to counterfeit because they are copied from a master hologram that requires expensive, specialized and technologically advanced equipment. They are widely used on several banknotes around the world, especially high denomination banknotes. They are also used in passports, credit and bank cards and premium products. There are different types of holograms, depending on the degree to which the optical security level of the hologram is incorporated during the mastering process.

This report studies the global Security Hologram production, demand, key manufacturers, and key regions.
