Abstracts

According to our (Global Info Research) latest study, the global Security Road Blocker market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

In 2024, global Security Road Blocker reached approximately 291,651 units, with an average global market price of around US\$ 225 per unit. Gross margin is about 33%. The cost is 150 usd. Production Capacity is about 350,000 units. A Security Road Blocker is a heavy-duty security barrier installed within roadways at critical access points that prevents unauthorized vehicle entry by raising a reinforced steel barricade from the ground when activated via hydraulic or pneumatic actuators. These systems are commonly deployed at high-security facilities such as airports, government and military sites, and other sensitive infrastructure, serving as anti-ram defenses capable of halting high-speed vehicular threats. The upstream supply chain of a Road Blocking System includes suppliers of raw materials and specialized components such as high-strength steel, hydraulic pumps, and electronic control units, along with construction and installation contractors responsible for on-site deployment of the barrier. Downstream, the supply chain encompasses end users such as airports, government facilities, and other organizations that operate these systems, as well as security system integrators who incorporate road blocking systems into broader access control solutions; it also includes dedicated maintenance service providers responsible for ongoing system upkeep and certification bodies that test and certify the systems to meet stringent safety and crash-resistance standards.
