According to our (Global Info Research) latest study, the global Seed Coating Machines market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Seed Coating Machine is a device for treating grains with liquid additives to protect the seeds. The seed is fed by way of gravity into a hopper, then descends into a volumetric dosing unit driven by a rotary motion. Then the seed falls into the cylinder onto a swivel plate, where the liquid is injected, fed by a pump. In the coating system, the processing time of each batch is very short.
