Abstracts

Seed treatment involves the use of processes and products for effective integrated pest management (IPM). It is a sustainable agricultural practice as the use of these products and processes targets the diseases and pests with lower dosages of active ingredients per hectare. Farmers struggle in controlling certain early season soil-borne pests and seed-borne diseases when they do not use treated seeds and have to resort to less environment-friendly and more expensive methods.

SCOPE OF THE REPORT:

This report focuses on the Seed Treatment in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The American region accounted for the highest adoption of seed treatment in 2017, majorly contributed by countries such as the US, Brazil, and Canada. The high adoption of insecticide seed treatment for corn, soybeans, and canola in these countries are the major reasons for their dominance in the market. Asia Pacific is projected to be the fastest-growing market for seed treatment in agricultural applications from 2018 to 2023. The significant growth in adoption of biologicals strengthened the market potential for local manufacturers to develop better and more efficient products such as biostimulants and biofertilizers.

The worldwide market for Seed Treatment is expected to grow at a CAGR of roughly 9.8% over the next five years, will reach 9480 million US\$ in 2023, from 5410 million US\$ in 2017, according to a new GIR (Global Info Research) study.
