According to our (Global Info Research) latest study, the global Seed Treatment market size was valued at USD 6940.7 million in 2023 and is forecast to a readjusted size of USD 10320 million by 2030 with a CAGR of 5.8% during review period.

Seed treatment involves the use of processes and products for effective integrated pest management (IPM). It is a sustainable agricultural practice as the use of these products and processes targets the diseases and pests with lower dosages of active ingredients per hectare. Farmers struggle in controlling certain early season soil-borne pests and seed-borne diseases when they do not use treated seeds and have to resort to less environment-friendly and more expensive methods.

The American region accounted for the highest adoption of seed treatment in 2017, majorly contributed by countries such as the US, Brazil, and Canada. The high adoption of insecticide seed treatment for corn, soybeans, and canola in these countries are the major reasons for their dominance in the market. Asia Pacific is projected to be the fastest-growing market for seed treatment in agricultural applications from 2018 to 2023. The significant growth in adoption of biologicals strengthened the market potential for local manufacturers to develop better and more efficient products such as biostimulants and biofertilizers.
