Abstracts

The global Segmented Ball Valve for Oil and Gas market size is expected to reach \$ 232 million by 2029, rising at a market growth of 4.7% CAGR during the forecast period (2023-2029).

A segmented ball valve is similar to a conventional ball valve, but with a contoured V-notch segment in the ball. This control valve has good range ability, control, and shutoff capability. The V-notch ball provides positive shearing action and produces an inherent equal percentage flow characteristic. It provides non-clogging, high capacity flow control. The V-notch ball has been specially contoured to maximize capacity and enhance seal life and shutoff integrity.
