Abstracts

The global Seismic Friction Damper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Friction-dampers are designed not to slip during wind storms or moderate earthquakes. During severe seismic excitations, friction-dampers slip at a predetermined optimum load before yielding occurs in other structural members and dissipate a major portion of the seismic energy.

This report studies the global Seismic Friction Damper production, demand, key manufacturers, and key regions.
