## Abstracts

According to our (Global Info Research) latest study, the global Seismic Server Rack and Cabinet market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Seismic Server Racks and Cabinet are built to withstand the lateral and vertical forces that occur during an earthquake. They are typically constructed with heavy-gauge steel frames, reinforced corners, and locking mechanisms that prevent the equipment from shifting or falling during an earthquake. In addition, seismic server racks and cabinets may feature shock-absorbing materials, such as rubber isolators or suspension systems, to protect the equipment from vibration and shock.

As the quality and reliability requirements for racks and cabinets continue to increase, seismic server racks and cabinets will adopt more robust, seismic-resistant materials and designs to ensure the safety and stability of equipment during earthquakes. In addition, as data centres continue to increase in size and complexity, seismic server racks and cabinets will also tend to become intelligent and manageable, enabling remote monitoring and management of equipment to improve reliability and safety.
