According to our (Global Info Research) latest study, the global Seismic Snubbers market size was valued at US\$ 676 million in 2024 and is forecast to a readjusted size of USD 844 million by 2031 with a CAGR of 3.3% during review period.

Seismic buffer is a device specially designed to reduce the impact of earthquakes on equipment. It uses advanced materials and structural design, and can respond quickly when an earthquake occurs, absorb and disperse the energy generated by seismic waves, thereby effectively reducing the damage caused by earthquakes to equipment. Seismic buffers not only have excellent seismic resistance, but also have good durability and reliability, and can maintain stable performance during long-term use. In addition, the installation and maintenance of seismic buffers are relatively simple, providing great convenience for users. In areas where earthquakes occur frequently, seismic buffers have become one of the important measures to protect the safety of equipment.
