According to our (Global Info Research) latest study, the global Seismic V-Loops Joint market size was valued at US\$ 902 million in 2024 and is forecast to a readjusted size of USD 1151 million by 2031 with a CAGR of 3.6% during review period.

Seismic V-Loops joint is a special device designed to protect pipeline systems from damage when natural disasters such as earthquakes occur. The device adopts a V-ring structure with good flexibility and elasticity. When the pipeline is deformed or displaced due to an earthquake, it can absorb and disperse stress through its own deformation, thereby protecting the pipeline system from damage. Seismic V-Loops Joint is widely used in pipeline systems in the petroleum, chemical, electric power and other industries, and is of great significance to improving the seismic resistance and safety of pipeline systems.
