Selective Laser Sintering (SLS) services refer to a type of additive manufacturing or 3D printing service that utilizes the SLS technology to produce three-dimensional objects from digital designs. SLS is a powder-based 3D printing process that involves the selective fusing of powdered material, typically a polymer or metal, layer by layer, using a high-power laser. SLS services offer a versatile and efficient method for creating complex and functional parts, prototypes, and components.

SLS services are increasingly offering a broader range of materials, including specialized polymers, composite materials, and even metals. The development of new materials with enhanced properties, such as improved heat resistance or electrical conductivity, is driving the adoption of SLS for more applications.
