Selective Laser Sintering (SLS) 3D printing service is a powder-based additive manufacturing technology that uses a laser to selectively sinter powdered materials, fusing them together to form a solid object layer by layer.

SLS technology is widely adopted in industries requiring high-performance parts with complex designs, such as aerospace (e.g., lightweight aircraft components) and medical devices (e.g., patient-specific implants). Its ability to balance design flexibility with mechanical strength has driven its growth in both prototyping and low-volume manufacturing, competing with technologies like FDM and Stereolithography (SLA).
