Selective separation nanocomposite film is a kind of film material with special structure and function. It combines nanomaterials and composite technology. By precisely controlling its pores, surface properties and structure, it can achieve the selective separation of specific substances. It is usually composed of nanoparticles, nanofibers or other nanomaterials and matrix materials, with high surface area, high selectivity and good mechanical properties. This kind of film is widely used in water treatment, gas separation, drug delivery, sensors and energy storage. It can efficiently separate and filter different kinds of molecules, ions or particles, while improving separation efficiency and maintaining low energy consumption and operating costs.
