## Abstracts

The self-adhesive protective film is made of polyethylene or polypropylene. It is used as paper in the manufacturing process of liquid crystal optical films, and as a surface protection film in other plastic plates.

According to our (Global Info Research) latest study, the global Self-Adhesives Protective Films market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The top layer of the self-adhesive protective film is tough and corrosion-resistant, while the silicone layer and adhesive coating are very thin, with little change in thickness. It can remove dirt and scratches without leaving any marks on protected substrates (such as high-quality display glass or car parts). Self-adhesive protective film has become a commonly used protective film due to its greater compatibility with different substrates such as glass, metal and plastic. In addition, they are easier to manufacture than other protective films.
