## Abstracts

The global Self-cleaning Color Coated Plate market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Self cleaning color coated panels are a type of construction material that is coated with a special layer of paint or coating and has self cleaning properties. This means that the surface of the board has the ability to self clean dirt, dirt, and other organic substances that may accumulate on the board over time. The self-cleaning ability of these plates is achieved through the use of advanced nanotechnology, which forms a layer of tiny particles on the surface of the plate. When exposed to sunlight, these particles can decompose organic materials and effectively clean the surface of the board. The use of self cleaning color coated panels can help reduce maintenance costs, extend the service life of buildings, and improve their overall aesthetic appeal.
