Abstracts

According to our (Global Info Research) latest study, the global Self-Contained Argon-Ion Laser market size was valued at USD 103.9 million in 2022 and is forecast to a readjusted size of USD 140.5 million by 2029 with a CAGR of 4.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The principal components of the argon laser system are power supply, plasma tube and resonator assembly. The plasma tube is the heart of the laser system; it consists of a bore made of BeO which is capable of withstanding very high temperatures and maintaining complete vacuum seal at the same time. The resonator assembly consists of two mirrors placed at each end of the bore, such that they are perpendicular to the length of the bore. The power supply of the laser system should supply the initial trigger pulse for initiating the plasma discharge and later for maintaining steady discharge.
