Abstracts

The global Self-Contained Argon-Ion Laser market size is expected to reach \$ 140.5 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

The principal components of the argon laser system are power supply, plasma tube and resonator assembly. The plasma tube is the heart of the laser system; it consists of a bore made of BeO which is capable of withstanding very high temperatures and maintaining complete vacuum seal at the same time. The resonator assembly consists of two mirrors placed at each end of the bore, such that they are perpendicular to the length of the bore. The power supply of the laser system should supply the initial trigger pulse for initiating the plasma discharge and later for maintaining steady discharge.
