According to our (Global Info Research) latest study, the global Self-disinfecting Luminous Door Handle market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The self-disinfecting luminous door handle refers to a door handle that can automatically disinfect the surface and emit light under certain conditions. This door handle automatically turns on the disinfection mode when no one is using it through the built-in ultraviolet LED light, effectively killing bacteria and viruses on the surface of the door handle and reducing the risk of cross infection. At the same time, it also has an LED light-emitting function, which can provide clear guidance and convenience for users at night or in low-light environments. The technical principle of the self-disinfecting luminous door handle is mainly based on ultraviolet LED disinfection technology and LED light-emitting technology. The ultraviolet LED lamp can emit ultraviolet light of a specific wavelength, which has a strong killing effect on bacteria and viruses. When the door handle is not in use, the ultraviolet LED lamp automatically turns on and irradiates the surface of the door handle, achieving a disinfection effect through a certain irradiation time and intensity. At the same time, the LED light-emitting module is responsible for emitting light when needed to provide convenience for users.

The self-disinfecting luminous door handle combines ultraviolet (UV) LED disinfection technology and LED luminous technology, and realizes automatic cleaning and disinfection functions by integrating it on the door handle. This technological innovation not only improves the practicality and safety of the door handle, but also meets consumers' pursuit of healthy life. With the improvement of global public health awareness, especially in the context of the epidemic, consumers have higher and

higher requirements for the hygiene of public places and personal living environments. As a product that can effectively reduce the spread of bacteria, the self-disinfecting luminous door handle has received widespread attention and demand. Especially in public places such as medical care, hotels, catering, and education, the market demand for self-disinfecting luminous door handles has grown rapidly. In summary, the self-disinfecting luminous door handle market, as an emerging market segment in the field of smart home and public health, is in a rapid development stage. It is expected that the market will maintain a rapid growth trend and usher in a broader development prospect.
