Self-driving forklifts, also known as autonomous forklifts or automated guided vehicles (AGVs), are material handling machines that operate without human intervention, using advanced technologies like sensors, cameras, LiDAR, and artificial intelligence. These forklifts are designed to navigate warehouses, factories, and distribution centers autonomously, efficiently moving goods, pallets, or materials within predefined routes or adaptable workspaces. Equipped with collision avoidance systems and real-time mapping capabilities, self-driving forklifts optimize workflows, reduce labor costs, and minimize errors or accidents. They are particularly beneficial in industries like logistics, manufacturing, and e-commerce, where they enhance productivity and operational efficiency through automation.
