Autonomous logistics delivery vehicles are vehicles that use autonomous driving technology to achieve autonomous navigation and transport of goods, aiming to improve logistics distribution efficiency and reduce operating costs. These vehicles are equipped with advanced sensors, artificial intelligence and machine learning algorithms, and can operate safely in a variety of environments such as cities, suburbs, highways and industrial parks. Autonomous logistics delivery vehicles are widely used in the fields of last-mile delivery, long-distance freight, warehousing logistics and special transportation, promoting the intelligent and automated development of the logistics industry.

Autonomous driving logistics delivery vehicles represent a major change in the future logistics industry. Through advanced autonomous driving technology, these vehicles can significantly improve the efficiency and safety of logistics distribution, while reducing labor costs and operating expenses. As the technology continues to mature and the application scenarios expand, autonomous driving logistics delivery vehicles can not only optimize last-mile delivery and long-distance freight, but also achieve more efficient operations in areas such as warehousing and park logistics. Although there are still challenges in technology, safety and regulations, the widespread use of autonomous driving logistics delivery vehicles will drive the logistics industry towards intelligence, automation and sustainable development.
