Abstracts

According to our (Global Info Research) latest study, the global Self-Expanding Stents market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Self-expanding stents are constrained within a delivery catheter until positioned and deployed. Because no balloon is needed to deploy the stent, the delivery devices are generally smaller than balloon-expandable stent systems. It expands spontaneously when released from the constraining device.

Self-expandable stents are made of a cylindrical, laser-cut Vascular Stent mesh that exerts its self-expanding force until it achieves its maximum diameter when released from a device where they are compressed for the purpose of recovering the intestinal lumen of a stenosed area. Presently, most stents currently used are composed of nitinol, a nickel and titanium alloy that increases flexibility, enabling placement in angulated regions.

Self-expanding stents (SE) are of high elasticity but apply low radial outward force

The classification of Self-Expanding Stents includes Vascular Stent and Non-vascular Stent. The proportion of Vascular Stent sales in 2019 is about 92.2%, and the proportion of Non-vascular Stent sales in 2019 is about 7.8%,

Self-Expanding Stents is widely used for Fem-Pop Artery, Iliac Artery, Carotid Artery, Biliary and Other. The most proportion of Self-Expanding Stents is used for Iliac Artery and the consumption proportion is about 51% in 2019.
