A self-flow air classifier is a device used for material classification and separation, widely applied in the powder industry. This equipment utilizes high-speed air flow to transport materials to the classification area, where different particle sizes are separated by adjusting the speed and direction of the air flow. Smaller particles remain suspended in the air flow and rise, while larger particles fall due to gravity, achieving the classification purpose. Self-flow air classifiers offer advantages such as simple operation, high classification precision, and efficiency, making them suitable for various industries, including chemicals, mining, food, and pharmaceuticals.
