According to our (Global Info Research) latest study, the global Self Hanging Stackers market size was valued at USD 127.6 million in 2022 and is forecast to a readjusted size of USD 169.2 million by 2029 with a CAGR of 4.1% during review period.

Self hanging stackers are specially made to align stacked containers in the hold of a ship or on a terminal and prevent them from falling, but they do not lock containers together. To make sure the containers do not fall, a double stacking cone can be placed aligning the containers horizontally.

The growing container trade, coupled with the continued development of port automation to cope with the growing demand, has led to the emergence of automated equipment for container handling, which in turn has driven the global demand for container stackers. Continued growth in commodity exports creates a significant need to maintain international port space. Major manufacturers continue to invest in enhancing the capabilities of stackers to improve efficiency and management of container stacking. Growth in maritime trade and continued demand for efficient solutions for container stacking in ports are the major factors expected to accelerate the growth of the global container stacker market during the analyzed period.
