According to our (Global Info Research) latest study, the global Self-illuminated Display Panel market size was valued at US\$ 167 million in 2024 and is forecast to a readjusted size of USD 235 million by 2031 with a CAGR of 5.0% during review period.

Self-illuminated display panels are a display technology that does not require a backlight and is able to display images or text by emitting its own light. Unlike traditional liquid crystal display (LCD) panels, which require a backlight to illuminate the screen, self-luminous panels emit light directly through self-luminous materials (such as organic light-emitting diodes OLEDs or quantum dots) to display images.
