Self Leveling Valves are self-regulating valves installed in hydraulic or pneumatic systems that can automatically adjust the fluid pressure according to the tilt state of the vehicle or equipment to ensure that the equipment remains level on uneven ground. It detects the inclination Angle through sensors and controls the distribution of hydraulic or pneumatic pressure to make each outriggers or adjustment device extend and contract, achieving automatic leveling. It is widely applied in aerial work platforms, cranes, construction machinery, etc., to enhance the stability and safety of equipment operation.
