According to our (Global Info Research) latest study, the global Self-lubricated Bearing market size was valued at USD 3995.8 million in 2023 and is forecast to a readjusted size of USD 6374.5 million by 2030 with a CAGR of 6.9% during review period.

Self-lubricating bearings, as the name suggests, provide their own lubrication during operation without requiring application of grease or oil lubricants. As the bearing operates, the lubricant is released through pores in the sliding layer, lubricating the bearing surface. The lubricant is uniformly dispersed throughout the sliding layer and thus there is no reduction in low friction bearing performance, even if the sliding layer becomes worn. A “running-in” surface is also usually included at the top of the sliding layer to provide low friction bearing performance at start up before the impregnated lubricant reaches the bearing surface.

Global key players of Self-lubricated Bearing include Daido Metal, Oiles Corporation and Tenneco (Federal-Mogul), etc. The top three players hold a share over 20%. China is the largest market, has a share about 28%. In terms of product type, Metallic Self-lubricated Bearing is the largest segment, occupied for a share of about 68%, and in terms of application, Automotive has a share about 62 percent.
