## Abstracts

The global Self-lubricated Bearing market size is expected to reach \$ 6374.5 million by 2029, rising at a market growth of 6.9% CAGR during the forecast period (2023-2029).

Global key players of Self-lubricated Bearing include Daido Metal, Oiles Corporation and Tenneco (Federal-Mogul), etc. The top three players hold a share over 20%. China is the largest market, has a share about 28%. In terms of product type, Metallic Self-lubricated Bearing is the largest segment, occupied for a share of about 68%, and in terms of application, Automotive has a share about 62 percent.

Self-lubricating bearings, as the name suggests, provide their own lubrication during operation without requiring application of grease or oil lubricants. As the bearing operates, the lubricant is released through pores in the sliding layer, lubricating the bearing surface. The lubricant is uniformly dispersed throughout the sliding layer and thus there is no reduction in low friction bearing performance, even if the sliding layer becomes worn. A “running-in” surface is also usually included at the top of the sliding layer to provide low friction bearing performance at start up before the impregnated lubricant reaches the bearing surface.

This report studies the global Self-lubricated Bearing production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Self-lubricated Bearing, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
