According to our (Global Info Research) latest study, the global Self-Lubricating Engineered Plastic Bearing market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The high-performance modified engineering plastics are injected by injection molding machines. The reinforcing agent filled improves the bearing's load-bearing and impact resistance, and the solid lubricating material reduces the bearing's friction coefficient. It is particularly suitable for working conditions where oil cannot be added and lightweight, high corrosion resistance and wear resistance are required, such as office machinery, fitness and entertainment facilities, food machinery, etc.
