According to our (Global Info Research) latest study, the global Self Media Video Diting market size was valued at US\$ 2832 million in 2025 and is forecast to a readjusted size of US\$ 5448 million by 2032 with a CAGR of 9.8% during review period.

Self media video editing refers to the use of professional video editing software to edit, synthesize, and color tone raw video materials, ultimately generating video works with complete narrative structure and rich expressive power. In the field of self media, video editing is not only a key means of content presentation, but also an important factor in attracting audiences and enhancing influence. The required skills for self media video editing include proficiency in video editing software, mastering the basic process of video editing, paying attention to the composition and color of video images, learning to use sound effects and music, and mastering the rhythm and fluency of video editing.

Driven by the rapid growth of global short-video platforms, live-streaming services, and the creator economy, the demand for video editing services tailored to self-media continues to rise. Platforms such as YouTube, TikTok, Instagram, Facebook, Bilibili, Douyin, and Kuaishou are constantly elevating video content consumption, compelling individual creators, MCNs, brand-owned channels, and SMEs to increase their content update frequency. This has led to a significant surge in demand for professional services including video editing, subtitling, thumbnail design, audio optimization, motion graphics, multi-platform versioning, and AI-powered editing. Meanwhile, the rapid expansion of corporate digital marketing and live-streaming e-commerce has prompted brands to place greater emphasis on the production efficiency and reach of high-quality video content; consequently, an increasing number of creators are outsourcing post-production to reduce costs, shorten turnaround times, and maintain consistent

publishing schedules. Furthermore, the maturation of technologies such as AI-driven editing, intelligent subtitle generation, cloud-based collaborative editing, digital asset management, and multilingual localization has further enhanced production efficiency and service quality, propelling the self-media video editing industry toward greater professionalization, intelligence, subscription-based models, and globalization.
