The global Self-priming Oil Pump market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A self-priming oil pump is a pump that can suck in liquid by itself and start pumping when it starts working. It is typically used to draw fluid from a reservoir or reservoir below the level of the pump. Through its special design, the self-priming oil pump can suck liquid into the pump body when started without the need for additional external suction devices or filling pipes. This makes the self-priming oil pump very convenient and practical in certain specific application scenarios.
