Abstracts

The global Self-Priming Type Sewage Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The self-priming sewage pump integrates self-priming and non-clogging sewage discharge. It adopts the axial backflow external mixing type, and through the unique design of the pump body and impeller flow channel, it does not need to install a bottom valve and a bottom valve like a general self-priming clean water pump. It can be used for irrigation and diversion, and it can also absorb and drain liquids containing large solid particles and long fiber impurities. It can be widely used in municipal sewage projects, river pond breeding, light industry, papermaking, textile, food, chemical industry, electrical industry, fiber, slurry and mixed suspension, etc. .

This report studies the global Self-Priming Type Sewage Pump production, demand, key manufacturers, and key regions.
